

Virtually Unmatched.

In an independent clinical study,* a survey of 25 radiologists and gastroenterologists strongly preferred the 3D display of Viatronix V3D-Colon Visualization System over that of other competitive systems.

The study compared Viatronix's V3D-Colon system with other systems for polyp conspicuity, 3D effect and likeness to optical colonoscopy. The study concluded:

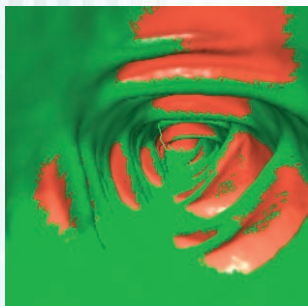

- Viatronix's V3D-Colon was overwhelmingly favored in the above categories
- Only the V3D-Colon system was successful in 100% of the flights
- Interpretation time for an experienced reader using V3D-Colon averaged about 15 minutes

The study concluded that effective time-efficient primary 3D evaluation appears to be feasible only with the Viatronix system.

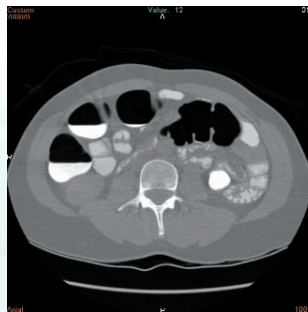

Supine-prone registration exclusively with V3D-Colon

If V3D-Colon excels during an independent study, perhaps it can meet the most demanding clinical challenges: yours.
